Current position

2018–

Allen Institute for Brain Science

Scientist III — Jan 2022–present

Scientist II — June 2018–Jan 2022

Building computational infrastructure and tools and leading data analysis projects for petascale electron microscopy volumes of the nervous system.

Research Interests

My research aims to discover the cell types of the nervous system and the rules underlying their patterns of connectivity at synaptic resolution, with the ultimate goal to understanding the role of anatomical structure in shaping functional patterns of neuronal activity. I employ a combination of large-scale neuronal circuit reconstructions from large-scale volumetric electron microscopy (EM), quantitative analysis and computational modeling and have worked extensively in both vertebrate and invertebrate nervous systems. I also build scalable computational tools with the goal of helping specialists and non-specialists alike to analyze, explore, and proofread neuronal circuits and cellular neuroanatomy mapped in EM.
